PRESENTS

GRAY WHALE

Famous for its curious nature and friendly disposition, this species attracts thousands or tourists to Baja California Sur every year. After a drastic decrease in its population towards the end of the XIX and beginning of the XX centuries due to whaling, the North Pacific population has recovered thanks to multinational conservation programs.

TAXONOMY 🗐 Kingdom: Animalia

Phylum: Chordata Class: Mammalia **Subclass:** Eutheria **Order:** Artiodactyla **Infraorder:** Cetacea

Parvorder: Mysticeti Family: Eschrichtiidae Ellerman & Morrison-Scott, 1951 **Genus:** Eschrichtius

Species: E. robustus

Conservation status: • Nom 059 – **Pr**

(special protection) • IUCN – **LC** (least concern)

Distribution: From the arctic waters in the Bering Sea, to the Mexican Pacific.

Diet: Amphipods, shrimp, mysids and polychaetes.

Sexual maturity: Between 6 and 12 years of age; can live to 75-80 years.

REPRODUCTIVE CYCLE

Instead of a dorsal fin it has a

series of 6-12 dorsal knuckles that decrease in size towards
